(54) VACUUM CLEANER

(57) Abstract:

PURPOSE: To facilitate to take out a dust collecting bag by providing a suction port for attaching a dust collecting paper bag and a filter in front of a dust collecting chamber and in its rear, respectively, and forming a hood part provided partially with a notch part, integrally in a lip body for airtightness provided in the upper part of the filter.

CONSTITUTION: This vacuum cleaner is provided with body packing 11 being a lip body for executing airtightness in a dust collecting chamber 6, and in this body packing 11, a hood part 14 is formed integrally in order to prevent a filter 13 provided in front of a motor-driven air blower 2 from falling out. In this case, at least in a part of the hood part 14, a notch part 15 is formed. In such a way, at the time of taking out a dust collecting bag which becomes full from the dust collecting chamber 16, since the dust collecting bag escapes by the

notch part 15, a chance by which the dust collecting bag is hit and caught decreases, the dust collecting bag is easily taken out, and also, such a failure as the dust collecting bag is broken by being caught is obviated.
